Notes:

*The power capacity is determined according to AES2-1984 (r2003) standard. Program power is defined as the transducer's ability to handle normal music program material.

**Sensitivity was measured at 1 m distance, on axis, with 1 w input, averaged in the range 1-7 kHz

GENERAL DESCRIPTION

This 2" professional high quality compression driver features a compact, lightweight neodymium rare-earth magnet system, an integral pure titanium dome and suspension attached to a lightweight aluminium voice coil. It provides an exceptional high acoustic power output over an extremely wide frequency range, with reduced harmonic distortion and excellent power handling capacity. The use of a rim centred diaphragm and push terminals permits simple field replacement without soldering.
